We recently celebrated our second year anniversary of the opening of our retail storefront here in Portland, Oregon, and wanted to take the time to thank you for your past interest and business in Earth-Centric products. As you already may know, Earth-Centric introduces natural renewable products made from starches extracted from corn, potato, tapioca, or other plant and vegetable matter, combined with biodegradable polymers, to create products that reduce the carbon footprint impact on the environment. Our many products range from Bioplastics, PLA, recycled Sugar Cane fiber material, and non-bleached paper products.

We would now like to introduce you to an exciting new dinnerware product-line which we have just included in our store inventory. This revolutionary all-occasion product-line is both disposable and reusable and made from Bamboo. Handcrafted from the sheath of the emerging bamboo plant, these dynamic new serving pieces are elegant, strong, and environmentally friendly. The beauty in using the sheath is that no part of the living bamboo plant is harmed in any way.

- Strong and leak resistant
- Handcrafted from Bamboo sheath
- No harsh chemicals or bleaches are used
- Requires little energy to make and Bamboo is 100% biodegradable

We especially wanted to introduce the 9.5" Square Wine Plate. This would be an attractive natural dinnerware piece which could be used for your Wine Tasting Room events and/or other occasions where food and glassware convenience is necessary. Check out this item and all of our other many wonderful "Green" products listed on our website at www.Earth-Centric.com.

Did You Know?

Some Facts About Bamboo Dinnerware...

Bamboo Dinnerware is made from the bamboo sheath. The sheath is a protective covering found on newly emerging bamboo plants. As the plant matures, the sheath falls to the ground and most often is unutilized. In processing these sheaths, they are collected, cleaned, boiled, laminated to the desired thickness, and pressed into shape. The result is disposable/reusable dinnerware that is elegant, strong and 100% biodegradable.

Consider this:

- Of all the disposable/reusable dinnerware on the market, our Bamboo dinnerware most closely resembles its source material in its natural form.*
- Bamboo dinnerware is produced without using any harsh chemicals.*
- Expanded polystyrene (Styrofoam) can take centuries to biodegrade.*

Bamboo is one of the world's best sustainable resources. It can grow up to a meter or more per day and matures in 4 to 5 years. Bamboo takes in nearly 5 times the amount of greenhouse gasses and produces 35% more oxygen than an equivalent stand of trees, making it an efficient replenisher of fresh air. By encouraging the growth and utilization of bamboo, we can begin to limit the negative impact we have on our environment. And remember, because our serving pieces are crafted from the bamboo sheath, no part of the living plant is used.
